Where: Basque Center for Applied Mathematics
- Sept 2021* **Brief description:**
Harmonic Analysis and Differential Equations: New Challenges. In this project we studied multifractality and intermittency properties of certain stochastic processes coming from physics. We needed ideas from Harmonic Analysis, Number Theory and Probability theory to study these topics
- Sept 2016*
— **Position:** Predoctoral Researcher
Where: Basque Center for Applied Mathematics
- Dec 2020* **Brief description:**
During these years I studied different problems on Harmonic Analysis, from singular integral operators to Poincaré-Sobolev inequalities both in Euclidean and abstract metric spaces. This culminated in the development of a new method to get Poincaré-Sobolev inequalities in different settings. This is collected in my thesis dissertation
