Sept 2021 **Position:** Postdoctoral Visiting Fellow
Where: Basque Center for Applied Mathematics
Brief description:
Harmonic Analysis and Differential Equations: New Challenges. In this project we studied multifractality and intermittency properties of certain stochastic processes coming from physics. We needed ideas from Harmonic Analysis, Number Theory and Probability theory to study these topics

Dec 2020 **Position:** Predoctoral Researcher
Where: Basque Center for Applied Mathematics
Brief description:
During these years I studied different problems on Harmonic Analysis, from singular integral operators to Poincaré-Sobolev inequalities both in Euclidean and abstract metric spaces. This culminated in the development of a new method to get Poincaré-Sobolev inequalities in different settings. This is collected in my thesis dissertation
